

During the period 01/11/2021-31/03/2022 the project group of the Municipality of Andrano has carried out the activities planned within the project framework according to the time schedule and engaging own human resources.

The documentation produced by the partnership has been translated into the national language (Italian) and published on the website of the Municipality of Andrano, where a special box with the logo of the project was created (<u>www.comune.andrano.le.it</u>). All information has been disseminated to local stakeholders through newsletters.

During public events – however very few because of the COVID-19 pandemic – citizens have been involved, bringing them closer to current issues, such as sustainability and prevention in the workplace with particular regard to MUC operators.

On April 13th 2022, in association with *ARO7/LE* - *Ambito di Raccolta Ottimale N.* 7 of the Province of Lecce, Municipality of Botrugno and *Azienda ERCAV* (the company responsible for the collection of waste on behalf of Municipality of Andrano) we have organized an event entitled "L'educazione ecologica per bambini che vogliono salvare il mondo" (Ecological education for children who want to save the world). All students of the schools in the area, cultural associations and citizens joined the event.

Information stands were set up with informative material and dedicated operators who explained the importance of separate collection and respect for the environment. The event also addressed issues related to the prevention of risks in the workplace, sharing some results of the project, and the medium-term training objectives planned within MUC project.

The MUC operators from the Municipality and the *Ercav Company* have been informed about the opportunity to carry out a specific training course at the end of the I02 objective scheduled in the months of October/November 2022. The present Municipal Administration has set up a room equipped for the purpose.
